HORSE-TRAINER SUN

Big sun 25 lamps, 250 Watt, 6 blowers

A warm aid

HORSE-TRAINER SUN is a solarium for horses developed by horse people for horses.
There are two different solarium models available covering all needs for IR treatment and drying of horses.

A horse solarium consists of a number of big red lamps with infra-red rays (IR), not to confuse with ultra-violet rays (UV), which are solar rays. These rays of heat on the horse enters the musculature and helps increasing blood circulation and the elasticity of the muscles, thus achieving a quicker healing after injuries. The use of solarium as heating prior to training makes especially the muscles of the back relaxed entailing a better benefit of the training pass. The solarium is also especially effective for drying of the horse after training or if the horse has been washed and made ready for competition.

The two sizes include 25 lamps and 15 lamps respectively.

Small sun, 15 lamps, 150 Watt, 4 blowers

HORSE-TRAINER SUN with 25 lamps

This solarium is a big and powerful solarium with 25 IR lamps and 6 blowers. This means that a wet horse can be dried in only 10 minutes. That is an incredibly fast drying time, which is especially expedient if the horse is wet and cold say after training in the HORSE-TRANIER EQUINE SPA or HORSE-TRAINER WATER on a cold winter day. The solarium is provided with a switch offering the possibility of switching off two of the five rows of lamps and thus only use 60% i.e. altogether 15 lamps.

HORSE-TRAINER SUN with 15 lamps

This solarium is made with three rows of lamps with five lamps in each i.e. altogether 15 IR lamps and 4 blowers. This version is a perfect solution for the washing site in all kinds of horse stables. This size is especially suited for riding schools, where it can be easily mounted with coin/token box. We also recommend this solarium as accessory for HORSE-TRAINER SPA, where the sun keeps the musculature of the horse's back hot during treatment in the cold water.

HORSE-TRAINER SUN

Here you can see the built-in blowers

The air from the blowers comes out around the bulbs

The bulbs can be replaced by energy generating UV lamps

Here you can see how the rays of the sun hit the whole horse

What makes HORSE-TRAINER SUN special?

The blower motor is mounted at the rear end of the solarium. The sucked air is led through all lamp holes so that the horse can be dried all over the body with utilisation of the heat from the lamps meaning a faster drying of the horse.
At the same time this also means a cooling of the bulbs entailing a longer life cycle.

How high above the horse should the solarium hang?

Tests and measurements have shown that the optimum height from the horse is 60 cm, at which the horse is heated and dried optimally at the back and side of the body.

HORSE-TRAINER SUN is incredible reliable. The machine is fully electroplated and powder coated making it resistant to moist and cold. At the same time this makes HORSE-TRAINER SUN very easy to maintain.

Extra equipment

Electrical pulley fixture. It may be difficult to obtain the optimum height for all horses at the same time and therefore HORSE-TRAINER SUN can be mounted with an electrical pulley fixture, which is easy to operate and adjust.

Coin/token box

If the solarium is installed at a place with many users such as a riding school, it is possible to mount a coin/token box offering the possibility of financing the solarium.

UV light

It is possible to replace some of the red IR lamps with white UV lamps. This may be used on horses, which spend much time in the loosebox especially during the winter season, where the horse does not have the possibility of so many sunshine hours in the fold. This has a beneficial effect on the fur of the horse and the horse gets in a better mood and becomes more willing to work. We recommend to replace between 4-6 lamps.

Specifications:

	15 lamps	25 lamps
150 Watt IR	15	-
250 Watt IR	-	25
Dryer	4	6
IR-power	2250 Watt	6250 Watt
Weight	40 kg	75 kg
L x W x H	180x95x40	250x169x40
Rated voltage	240 V	400V
